ABOUT US

Catalyst provide a comprehensive and cost effective solution to run your business. Incorporating cutting edge ideas and features, it takes business management to new levels.

Catalyst Computer Systems was founded in 1989 and now runs with more than 25 full-time staff. We can provide you with a complete business management system. This provides administration for all major areas of a business. With over 30 years of experience and a team of dedicated staff, we deliver all the support needed to get the very best from our systems.

The software is fully modular; meaning you only buy or rent what you need. It will allow you to incorporate all of your business necessities into one place. All new hardware sold comes with on-site warranty for peace of mind.

Catalyst not only write and supply specialist 'Platinum' software but also hardware, networking, third party software, installation and training - not forgetting our ongoing support service that is second to none.

All of our modules feature report generators that enable the creation of reports tailored to your own requirements. Features include full on-screen help, configurable document formats and custom menus. You can also report directly to your smartphone.

MACHINERY & WHOLEGOOD SALES

Simple and effective management of machinery and wholegood stock, sales and marketing, and more!

The sale of machinery & wholegoods is the core activity of the agricultural, horticultural & construction trades. It often drives other areas of sales within the business from parts and shop sales through to workshop. As this is such an important part of the business it often involves dealing with high value items. It is therefore vital to get the operation and administration of it running as streamlined as is possible. Each machine is unique and requires specialist information to be stored. Most of these products even carry their own serial numbers and often have individual features and modifications. You often need images for marketing, or videos to illustrate their operation.

This complexity of information demands specialist software to handle the sales process and present information when and where required. The presentation of that information needs to be professional and to reflect the image and values of your business.

We make it simple to control your machinery stock records and the entire sales and marketing process; from advertising to ongoing customer contacts after a sale has been made. This is all done by a single fully integrated system feeding information automatically into other key areas of the business, from accounts to workshop.

Quoting, invoicing & order processing

SALES PROSPECTING & CONTACT MANAGEMENT

An efficient programme that can be used either stand-alone, or integrated with any other aspects of the software, including Machinery Sales or Accounts. allowing you to manage all of your sales prospecting activities.

What is Prospecting?

Prospecting is the process of working to maximise sales by actively contacting potential customers, also known as ‘Prospects’. The purpose of this is to bring new clients into the business whilst retaining the sales from existing clients. From a “business systems” stand point, prospecting amounts to recording information about prospects, their requirements and past contacts, mainly with a view to using this information to maximise the impact of future contacts.

This is achieved by regularly contacting prospects, and using information gathered from previous conversations with the prospect (such as their specific requirements, interests or preferred contact method) to help encourage a sale. It’s essentially a helpful admin tool for the sales team!

Quite obviously, prospecting is vital to a business. The smoother the sales process becomes then more sales can be made, which in turn equals more profit for the business.

How does Catalyst help?

The system acts as a organisational tool, and provides sales staff with the information required to ensure prospects are being contacted on a regular basis, with material that is of interest to them. It also enables the sales team to be more effective by providing information at their fingertips about the prospect, their requirements, and past conversations or contacts.

It is simple to produce marketing material by the prospect’s preferred method of contact, be that email, SMS or physical letter. There are standard templates provided and you can tailor these to your own standards and requirements. In addition, sales teams can plan campaigns to prospects with specific interests and then use the mailshotting to implement these campaigns. You can then report on the results of the campaigns to assess their impact and calculate conversion rates.

It is now far easier to connect
with your potential customers

Simple contacts due list

Colour indication of urgency

exchanges

Streamline your workshop tasks
with our specialist module

WORKSHOP MANAGEMENT

The workshop is the place in the business where your engineers really get their hands dirty! It's because of this hostile environment that it can be tricky to keep on top of all of the admin work required for your workshop to run smoothly and efficiently.

Platinum's 'Workshop Management' module is designed to take all of the work out of streamlining your workshop, by condensing everything you need into one easy-to-use software module.

The module includes features such as; estimates and invoicing for jobs, standard job templates, machine check sheets and lots more.

We can even provide a rugged barcode-enabled tablet, proven to withstand even the most hostile of workshops for you to run the system on.

There's no excuse for not recording time and parts used in the workshop!

Estimates & invoicing

Real time labour logging

Remote working

Intuitive diary

Machinery checksheets

“The workshop management module is user friendly and extremely clear to see how busy the workshop is or has been.” Hughes Brothers

Standard job templates

We have simple to understand, intuitive dashboards to check performance, as well as in depth productivity analysis.

Capture signatures

We even produce automated service reminders, essential for keeping the work flowing. Send text messages at the touch of a single button to ask customers to call if a snag is encountered or to advise them if a job is complete.

Remote working

Standard machinery checks can be done by an engineer using a hand-held tablet computer, advisory work can be logged and customers notified or even reminded if the work is not undertaken immediately.

Employee activity report

CUSTOMER RETENTION CENTRE

Regularly keep in contact with your customers on an automated basis helping you to maintain your customer relationships.

What is Customer Retention?

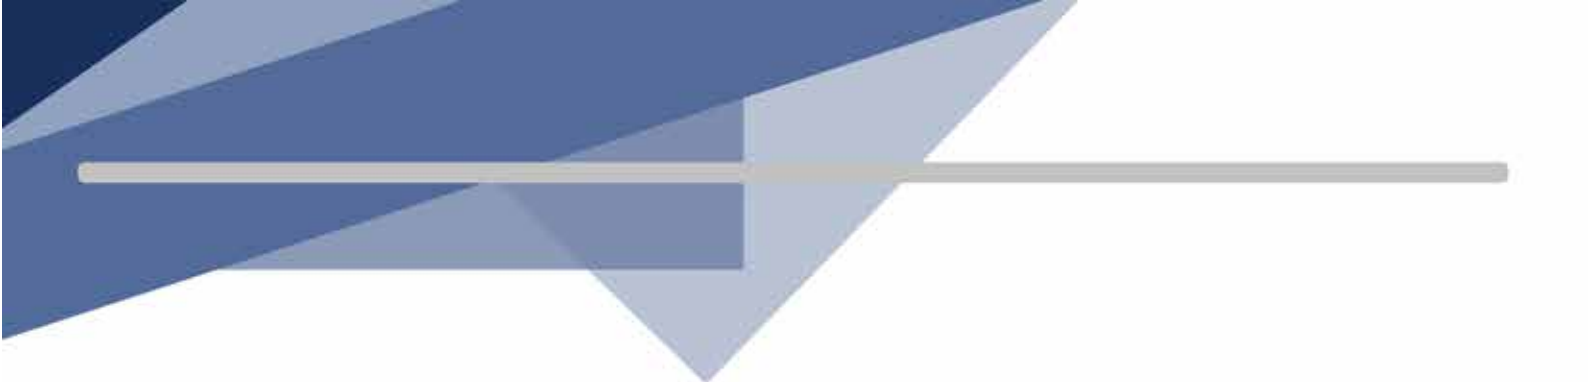

Customer retention is the process of encouraging your customers to return to you in the future and use your products or services again. In short, it's maintaining customer loyalty.

So how do you encourage this? It amounts to making the customer experience of your business as easy and enjoyable as possible for them. Largely this is down to the personal touch of your service.

Our 'Customer Retention Module' takes the time and effort out of keeping in regular contact with your customers, which is achieved in an automated yet versatile way.

The system can contact customers by email and SMS, or even by traditional printed material. You can choose the most suitable method for each individual contact, depending on their preference. You can even exclude customers so they are never contacted with any marketing material, should they ask to unsubscribe.

*Increase your customer satisfaction levels,
helping you increase sales!*

The range of standard customer retention actions is truly impressive. Returning customers are often considered the most profitable for any business, and we've made it easier than ever to keep in contact with them.

General Birthday wishes & Christmas greetings

Multiple service reminders

Multiple sale follow up

Advisory work reminders

Finance expiry

Workshop thank you

Warranty expiry

SHOP SALES & STOCK CONTROL

Counter sales, supplies to workshop, customer orders and stock taking. All aspects of shop sales and stock control.

Your shop is the place where a large amount of often lower-value sales are made on a regular basis. Speed is a priority in this department, nobody likes queueing for customer service. Our system offers a range of features to help speed up customer handling, whilst also minimizing staff workload.

The large number of stock lines involved in retail and franchise work tends to make ordering and stock taking a time-consuming task. One-off special orders can often make things more complicated still.

Fear not! We have an easy to use sales system backed by a huge array of tools for those tricky moments. You can; create and customise quick buttons for touch screens and fast moving items, print and scan barcodes, link to credit card authorisation hardware and even hand held devices for stock taking. Special orders are a breeze even when a deposit is needed. We are also able to update manufacturer prices as soon as they change.

Touch Screen Sales :

This feature is designed to work smoothly and intuitively using touch screens, featuring large customisable buttons to represent frequently sold items. This will be especially useful for those who sell small non-barcoded items or run cafés.

Customer Loyalty Scheme :

There is also an option to supply loyalty cards to customers, which can be used through the point of sale screen to earn points, and subsequently redeem those points as discounts on future purchases. Bonus points and promotions are fully customisable.

Keep track of all your parts & accessories

Order Processing :

Order processing directly replaces the manual special order book as well as keeping track of all outstanding orders from suppliers. It has many features, including the ability to print a customer's name or a bar code automatically onto a label when goods arrive. This makes it an invaluable add on to stock control.

Ordering can be completely automated to follow sales trends and even seasonality to recommend stock levels.

Item, shelf and special order labels can be printed, all of which can include barcodes. Incredible and flexible quick search is achieved by description, stock code or supplier part numbers, allowing for an easy sales process!

Process shop sales

Receipts & full invoices

Print & scan barcodes

Stock take on smartphone

Links to supplier ordering

Automated re-order levels

PARTS & PRICES FILES

We maintain an extensive list of manufacturer and after market parts and prices files for use by authorised dealers.

Here are a few names you may recognise...

HONDA

Can't see what you're looking for?

It's a constantly changing world, new companies start & new ranges regularly enter the market. If the manufacturer or distributor you would like a parts and price file for is not listed, we can approach them on your behalf. Simply contact Catalyst's sales team, provide us with the contact details and we will attempt to obtain the file on your behalf.

Our library of parts and price files is always expanding, for a constantly up to date list of all the parts and price files we can provide please scan the QR code below.

PERSONNEL PLANNING

A diary and reminder system designed to work in unison with the main Platinum modules. This module will allow the simultaneous viewing of any number of individual diaries for people, or resources, without having to leave your desk.

The Personnel Planning module is our integrated human resource package. This comes with two main features; 'Diary' and 'Tasks Outstanding'

The diary can be used to create entries for a number of items such as; employee working hours, appointments and even holidays. When used for prospect site visits the diary can be used to print off customer address labels and diary entry labels with full contact details, as a reminder for the employee.

'Tasks Outstanding' allows you to create tasks that can be set for individual employees, or entire departments. This means that your notifications or reminders for an employee to carry out a task would not be misplaced. Tasks can be different 'types' and can also be marked with a priority level using a colour code. A full audit trail of any adjustments to the task can be viewed with ease. Time can be logged on a task so you can see exactly how long is spent on each task by any employee or team.

Create, view, edit and delete tasks for employees and departments

Easily search and filter tasks

Create diary entries for employees and departments

User-friendly reporting systems

Accounts

A conventional, double entry book keeping system, which can be integrated with all other parts of the software. This product competes successfully with the mainstream accounting packages nationwide as a stand-alone accounting package in its own right.

In common with most other accounting systems, Catalyst Accounts has three major parts:

The Sales Ledger

The Sales Ledger controls all of the financial aspects of customer accounts. Tasks that are time consuming and open to error when done manually, such as debt analysis and statement production, are performed accurately and within a fraction of the time.

The Purchase Ledger

The Purchase Ledger allows you to keep on top of all your dealings with suppliers. It allows you to enter data in a very easy way, making it far easier to keep track of your purchases.

The Nominal Ledger

The Nominal Ledger is the heart of this module. This brings together all the information needed to produce the reporting expected by accountants and the VAT authorities, including online VAT returns. Profit & Loss, Trial Balance and Balance Sheet are all simply catered for and the whole module is fully audit trailed. Bank reconciliation including bank links is also a feature.

Using the customer details entry screen, you can enter any relevant information and customise how their account should interact with the different modules of the system. In the 'Customer Relationship Manager' you can view all known customer activity. It also shows the customer history where it is possible to view the details of all previous transactions.

Fully auditable

Making Tax Digital ready

Online VAT filing

Automated regular postings

*HMRC recognised, for helping you
Make Tax Digital!*

PAYROLL

Fully featured professional payroll package designed to allow the user to calculate national insurance, tax, pensions and all the other details of payroll, in minutes and with very little effort.

The Payroll package handles all aspects of the calculation of income tax, national insurance, statutory sick pay, statutory maternity pay, statutory paternity pay, statutory adoption pay, pension contributions, including auto-enrolment, and deals with payrolled benefits in kind.

The input of gross pay information is as simple as possible. It works on the basis that either the gross pay for the period is known, or can simply be calculated from the number of hours worked.

With our system, time consuming tasks such as tax calculations can be achieved in a small fraction of the time they would otherwise take.

Full documentation as required by HMRC and other interested parties is produced, as are pay slips, P45/P46 and a comprehensive payroll analysis. Input for each pay period is as simple as it can be, with information for all employees accessed from a single input screen. Input of the payroll information is thus extremely fast.

Calculation of deductions is immediate and all reporting is pre-configured and may be done by the press of a single key.

Submissions of EPS and FPS documents is also made extremely simple using this module.

The payroll keeps full and comprehensive history for each of your employees, ensuring that auditing the payroll is extremely simple.

Electronic filing of both in-year and end of year documentation is a standard feature. P45 & P46 documents can be filed electronically direct from the Payroll module, provided you have a Government Gateway username and password.

*Make your calculations easy
with our Payroll Module*

Electronic uploading of end of year data processing

The Payroll package handles all aspects from income tax to maternity pay

Time saving

Provides full documentation as required by HMRC and other interested parties

RTI compliant

Auto-enrolment

BOOKING & HIRE

The perfect organisational tool for keeping on top of all your booking and hire activities, from the initial booking, right through to final invoicing and payment.

Hiring out machinery and other equipment is a task that often requires a large amount of organisation and administration. No business wants to lose track of their bookings and risk double booking a stock item, that can be awkward!

Platinum's 'Booking & Hire' module is the perfect tool for helping reduce this administration work and acts as an organisational tool for all bookings and hires made with your business.

The module offers a wide range of features that will streamline your service, everything from creating the initial booking, taking deposits & security payments, producing customised agreement forms, and taking the final payment once the hire has been returned.

The module also links to Platinum's 'Machinery & Wholegood Sales' and 'Stock Control' modules, so you can easily make your existing stock available for hire, helping avoid those troublesome double bookings!

Invoicing customers and taking payments is made incredibly easy when using this module and can be done within just a few clicks. The system automatically deducts any deposits or security payments paid when the booking was made from the final total payable amount.

Images, videos and notes can be added to each separate booking, which can be used to record the condition of equipment both before and after it has been hired out to a customer.

The Booking & Hire module also has its own report generator, allowing you to create a range of customisable user-friendly reports, giving instant access to comprehensive information on all booking & hire activities in the past and present.

This module is a must-have for any companies who offer a hire service, or regularly book appointments within their business.

Arrange booking & hire of equipment

Connects to unit sales and stock control modules

Take deposits & security payments

Produce customised agreement forms

Take final payments and generate invoices

Add images, videos and notes to individual bookings.

Customisable price plans

REPORT GENERATORS

Throughout the system are a wide range of powerful report generators, allowing you to instantly create comprehensive and user-friendly reports on any information you require, which are completely customisable to suit your needs.

The system contains over 400 standard reports, all of which can be customised to suit your exact needs. Giving you a wide range of comprehensive and user-friendly information, available instantly throughout the Platinum software.

400+ Customisable reports

Output to Print, E-mail or Text

Produce user-friendly graphs

Export to Excel

Capable of producing everything from simple lists, graphs and even complex marketing documents combining text with images, the report generators are incredibly powerful. Users can design, build and run their own custom reports.

To make them easy to use you can add custom reports to our standard menu structure or even just for a specific user, or group of users. You can even automate reports to run at regular times as a reminder to order stock or attend to outstanding issues.

THIRD PARTY INTEGRATION

We understand that no single company does everything you need to successfully run your business. This is why our Platinum software incorporates third party integration with a wide range of other useful software. It works both ways meaning we can extract information from systems such as machine information and import it in to other third party software.

Typically we integrate with fiche software, supplier ordering software and spreadsheets. We even communicate with third party accounting systems such as Sage, despite having our own. Although it is easier to use our integrated accounting system, some users have historic reasons for deciding not to change over. We're always happy to work with people to ensure their Sage package is working in sync with the Platinum system.

We can also import payroll information directly in to our nominal ledger and have standard configuration for Sage. We can export transactions into Sage and other common accounting systems.

How are we so flexible? Largely it's down to our report generator and also our data import module. The data import allows custom configuration to read in text files to our database in a number of key areas allowing orders, price changes and a host of other information to be painlessly and speedily incorporated from other products.

Migration from other Systems

Our data import ability makes migration from other systems much less difficult and time consuming than you might expect. Why re-key information you already have in another place?

We have extensive experience in migrating our customers information from competitor's products and strive to make the process as simple as possible. It's never possible to extract absolutely everything but we constantly refine the process and have documentation to make it as seamless as possible.

PLATINUM ONLINE - MANAGEMENT

Platinum Online provides users with a secure internet browser application, accessible using any internet enabled device (smartphone or tablet), that gives you remote access to aspects of your main Platinum system, wherever you are!

Using Platinum Online allows you to view the dashboards from your live Platinum system - perfect from a management perspective, as it instantly allows you to access vital information such as sales, stock & workshop diaries at a single glance. You can also view employee activity, set activities and tasks and check stock levels.

All of this without having to set foot inside the office!

Get instant information from Platinum on your smartphone! View your dashboards, upload images to machinery, complete a stock take and more. This online browser application can provide you with management accounting information anytime, anywhere.

Platinum Online's responsive web design allows it to be used simultaneously on a large number of mobile (and desktop) devices and computers:

- Desktop Web Browsers.
- Apple iPhone, iPad.
- Android Phones and Tablets.
- Google Phones and Tablets

A photograph of a man and a woman in a field of tall grass. The woman, wearing a blue jacket, is holding an open book. The man, wearing a red jacket, is looking at a small device in his hands. Two dogs, a brown one and a white one, are in the foreground.

Upload images for machinery, stocks, workshop jobs

Stock checking, statistics and enquiry

Sales ledger, stock, machinery and workshop dashboards

Real time reporting from any Platinum Report Generator

Proof of delivery upload with automatic status change

This feature is great for managerial staff who want to keep up to date with management figures at their fingertips.

PLATINUM ONLINE - FIELD TECHNICIANS & WORKSHOP

As well as being a great managerial tool, Platinum Online is also perfect for streamlining your workshop process, or even technicians out in the field.

Platinum Online allows your technicians to access aspects of the Platinum system, even in the most remote of locations, using any internet enabled device.

The system can be accessed both with or without an internet connection. Data is simply synced to the device whilst connected to the internet, and if the internet connection is lost any changes made by the user will be beamed back to HQ as soon as the connection is restored.

This allows technicians to log any information about a job such as; stock allocation, technician activity, diaries and more, whether tucked away in a workshop, or out in the field.

For mobile workshop technicians

Your technicians will no longer have to worry about filing job cards away whilst out on the road to ensure the correct information reaches head office to be logged in to the system.

The location of the engineer is also tracked when logging this work, so head office can see exactly where the engineer is working during each job. This tool can be used to ensure the safety of all your engineers, and should you need to reach them in an emergency you will be able to find their most recently logged location using the Platinum system.

Your main Platinum system is updated automatically, allowing you access to comprehensive information provided by the technician, as soon as they next have access to the internet (WiFi or 3G/4G).

All of this is provided free of charge on the first device for any system currently being maintained or rented. Use on multiple devices is simple but extra licences will be required. It is essential that mainstream Platinum software is updated to the latest version in order to access the latest features of Platinum Online.

Allocate parts, labour, status and images to workshop jobs

No internet connection required

Real-time updates of all logged information

Machinery checksheets

Platinum Online is available to use on a wide range of portable devices, as well as desktop computers, making it easy for technicians to stay in contact with head office, wherever they are.

E-COMMERCE & FINDIT

With our E-commerce module, you will be able to download orders automatically from a range of online shops, such as eBay, your own website, or Platinum FindIt. The listed items can be updated automatically, direct from your stock control system. FindIt is a great place to list your available machines online and boost sales!

Users of this module are able to upload a ready made web shop configured primarily from inside your Platinum software that can run in either 'Retail Mode' or 'Trade Mode.'

Retail mode is for standard day-to-day customers who will likely be paying full price for products, and can make payments at the checkout via PayPal. Trade Mode accounts, on the other hand, can be allocated to certain customers, and terms such as discount levels and payment terms for each individual customer can be set during the creation of the account.

There is also considerable scope to tailor the look of the site to fit in with your companies branding using a 'Custom Style Sheet' that you can edit yourself. You can also control how the site is organised in terms of breadcrumb trail - you can define the categories from inside Platinum and which individual items are allocated to each of the categories.

Integrating with third party web developers can be done using the Platinum CMS documentation which explains the standards and formats to which Platinum works. We work closely with; New Star Media, DealerWebs, Media Links Online, South Coast Web Design and others to provide the best web development solutions for our customers.

Integrating third party E-commerce sites such as eBay and Autotrader is made seamless, and unit stock levels are automatically updated across all platforms.

Unveil your machinery to the world
with our specialist Catalyst FindIt site!

What is Catalyst FindIt?

Catalyst FindIt is our very own machinery advertising platform, which allows our dealers to upload their machinery stock directly to the internet, using your Platinum system.

FindIt receives over 1,000 visitors each day, a huge potential market accessible to all Platinum users completely free of charge.

Your FindIt page can be styled to correspond with your own site, to keep your branding consistent.

Your page can also be linked directly to your main website to ensure your unit details and images are always correct across both platforms.

Just imagine what these sort of sales could do for you at no extra cost - what have you got to lose?

Automatic uploads from
machinery sales

Generates leads from all over the
world

Customised FindIt page, which can
be directly linked to your own
website

TRAINING COURSES

A range of user training for both new and experienced Platinum users, to help you make the most out of your system.

With everything Platinum has to offer, you will constantly be finding new ways in which it can help improve your day to day process, especially as we're constantly updating the system with new and exciting features.

To ensure you're getting the best from your Platinum system we offer a range of training courses aimed at improving the way in which you use the system, and ensuring you're not missing out on features that may be helpful to your business.

The training courses are designed for both new and experienced users alike, so whether you have a new employee starting or just wanted to maximise its potential in your business the training is a great way to achieve this!

Some of the topics covered in our regular training courses are as follows;

- ***Accounts***
- ***Stock Control***
- ***Customer Retention Centre***
- ***Machinery Sales***
- ***Workshop Control***
- ***Report Generator***

We also offer private training days for companies, where you can bring a team of up to 6 people to our Leicester offices and receive training on any aspects of Platinum you require from one of our experienced support team members.

HARDWARE SERVICES

As well as writing and distributing our Platinum software, we also build a range of extremely powerful, and inexpensive hardware, built and tested by our hardware engineers at our Leicester offices.

Each computer we build is designed to the exact specifications required by each individual customer. All hardware products come with a one year on-site warranty, and include maintenance cover should anything go wrong.

A complete installation and configuration service is offered with everything we sell. It may be simple telephone support to set up a printer, or it may be several days on-site setting up a complex server network, and configuring software.

Our sales team are happy to provide free technical advice and a no obligation quote for any hardware you require.

Free technical advice

Custom built hardware

One year on site warranty

Maintenance cover

Hardware Installation

SUPPORT SERVICES

As a Platinum user you will have access to our comprehensive support services, available five days a week as well as an out-of-hours and weekend emergency hotline, should you need it.

We have a team of full-time and fully trained support staff who can provide on-site or remote support, as well as a growing team of regional support staff that can offer on-site support within shorter periods of time for those customers that do not live in close proximity to our main offices.

As well as this we also maintain a widely-used and regularly updated 'Knowledge Base', a collection of articles that cover all aspects of using the Platinum software, from the initial getting started, right through to the more advanced aspects of the software. This a great way to continuously grow your knowledge of the software and how it can help you succeed.

Fully trained support specialists

Regional support specialists

Out-of-hours emergency hotline

Remote & On-site Support

Regularly updated online Knowledge Base

Get in touch with our team to take
your business to the next level!

NEXT STEPS

Catalyst can help you gain full control of your business -
all with one, easy to use, computer system.

All businesses are different, and require a variety of different things from our software. It's because of this we take our time in understanding your business and its requirements in detail (and even visit your site, when possible) before recommending exactly what aspects of our software you would benefit from the most.

We offer systems for every budget and every size of company. We are always happy to visit you to discuss your exact requirements and prepare a plan of action with detailed budgets. There are various ways that you can pay for your system. Most companies opt for a simple leasing arrangement over three or five years, however you can also purchase the software which may work out cheaper for you in the long run.

For those companies where cash flow is critical, or who are not sure about a long term commitment, then we can offer a simple rental agreement on the software component of the system. Pre-sales consultations and demonstrations are provided in person and are entirely free without any obligation to proceed.

Our aim is always to provide the best products and services, backed up by the very best in after sales service.

T

ESTIMONIALS

“ Having such a large amount of stock within our business, all the data is stored in one place and kept organised, making it simple to access.

Your staff are extremely helpful when we have issues and sort the problems out within moments. The knowledge and helpfulness of your staff is something to be proud of.

Hughes Brothers

We have been with Catalyst now for over 10 years and the system allows you to be as complex as you feel capable of being. It has made our day to day office work less than half!

KIK ATV's Ltd

“ Since installing Catalyst Platinum Software to handle our stock control and customer invoicing we have found it to be a very efficient and cost effective alternative to the “industry standard” software we were previously running. Its functionality and easy to use format are a dream, and the aftercare service is second to none. Friendly and knowledgeable staff are always on hand to assist with any questions we have, from the mundane to customising the software to our specific needs.

A & M Group

”

“ Catalyst have been our provider since 1996 and your software, hardware and backup services are excellent. Your staff are always very helpful and respond quickly to our requests for help and support.

On-going training and updating of the system is excellent as well as the adaptability within it.

We highly recommend Catalyst Computer Systems.
