

Platinum 4.5.5 and Platinum Online 2.14.9

Platinum Desktop Updates

Improved logging for Clover card payments and refunds, providing better traceability and support diagnostics.

Unit Purchase Orders now has a variable available for displaying Unit Sales text for improved clarity and consistency.

Enhancements to the Loyalty Card API to support updated integration requirements.

Platinum Online Updates

System upgraded to Angular 20, delivering improved performance, security, and long-term support.

New Authorise Order tick box added to Unit Sales Online, giving customers greater control over order authorisation.

Bugs Resolved

Clover-enabled terminals now prevent entry of a credit card amount unless payment is taken on the device.

Resolved an issue where duplicate e-commerce orders could be created following a failed import confirmation.

Fixed an intermittent error displayed during catalyst-data/findit uploads.

Corrected a query error in VS92 that could occur when updating the service history table after DSR uploads.

Resolved an issue where the 'Issue credit card credits' setting was not being applied correctly
