

Platinum 4.5.8

Platinum Desktop Updates

Linnworks is now released in Platinum allowing users to integrate with all the sales channels that they have to offer.

Payment Link document tokens now check whether the Credit Card module is enabled before being processed, improving behaviour for sites where the module is not in use.

SXSITE can now be set as a static environment variable, allowing users to retain the site that they're signing into rather than using the primary users site.

Multiple gift cards can now be used for a single payment, giving users more flexibility when taking customer payments.

Unit Purchase Ordering now includes copy/duplicate functionality, reducing repeated manual entry when creating similar purchase orders.

Bugs Resolved

Resolved an issue where unit finance could disappear after an order was moved to Done.

Fixed an issue where units created from the Unit Purchase Ordering copy/duplicate process could be created with an incorrect status.

Resolved an issue where receipt print tokens could repeat across the printed output.
